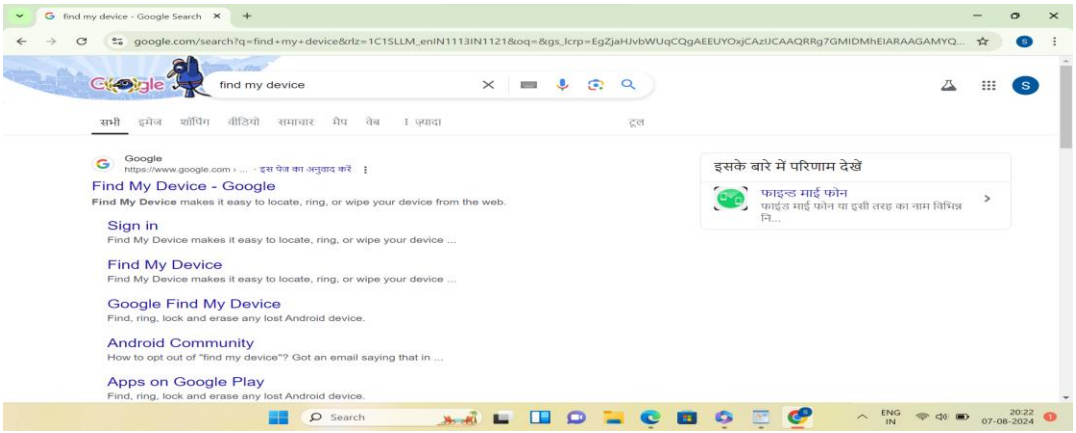
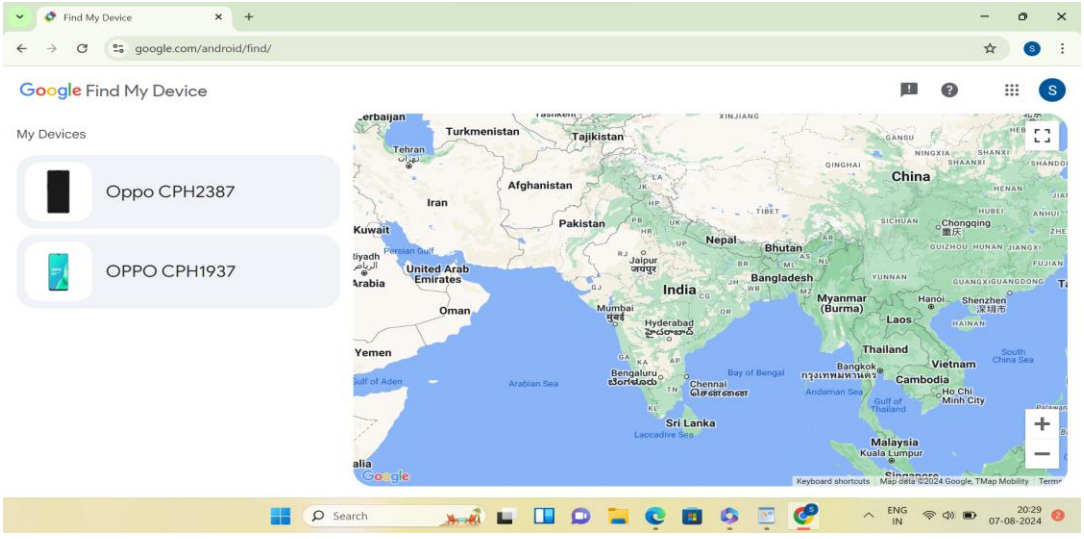
- **Practical no: -** 6
- **Practical name: -** Locate mobile devices using Gmail.
- **Performed on: -** 05/08/2024

Steps: -

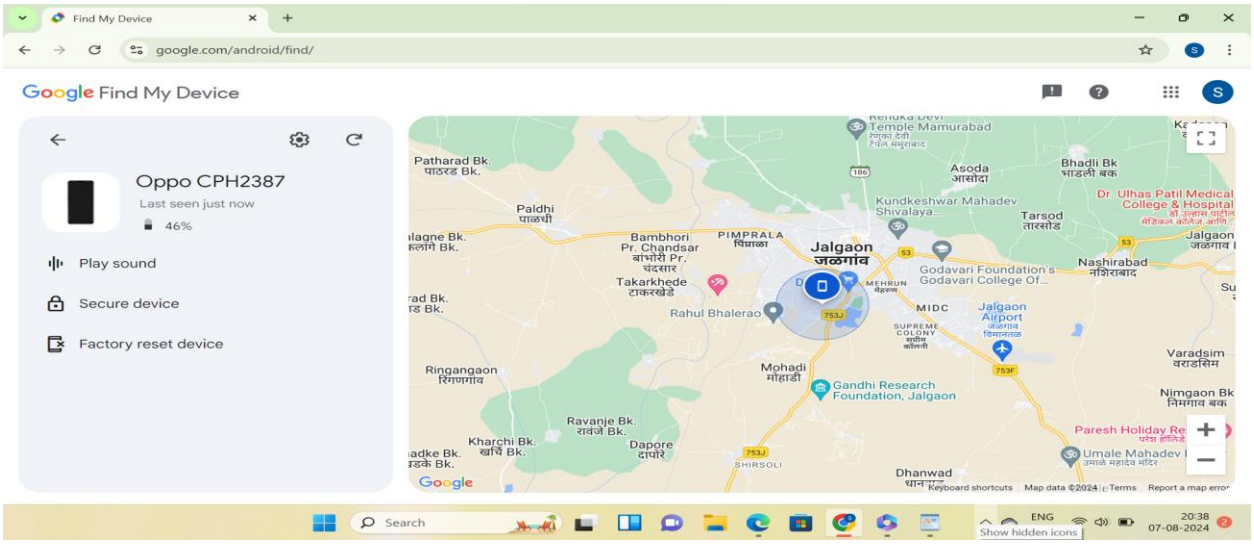
Step 1: Sign in using your Gmail account in google chrome. Ensure that the account already exists in your mobile device which you want to locate. Next, search Find my device in google chrome after your account has been signed in. After searching, visit the first website that is find my device.

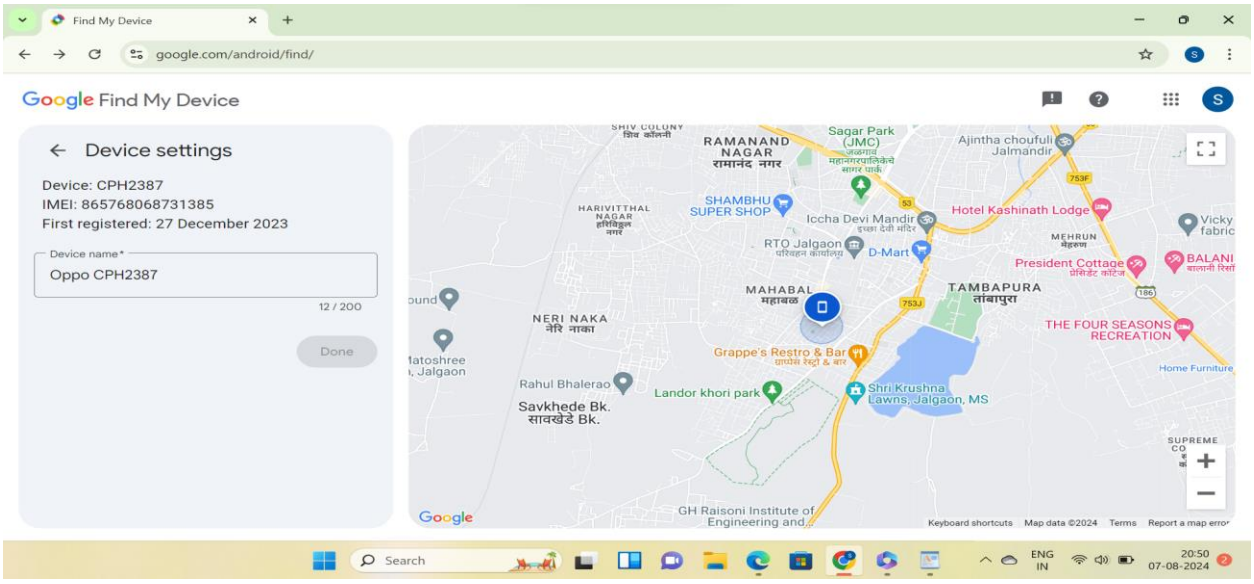


Step 2: -After visiting the website, mobile devices names appear which is shown in screenshot below. Click on any one of the devices.



Step 3: - After selecting the device, some details came into view of selected device such as remaining battery level, device name, location of device with google map's view. It also has different features such as playing sound on device, securing it by locking the device by pin/password and signing out of your google account on the device.





- With all these features, we also get some additional details about the device by clicking on the settings icon such as first registered date and International Mobile Equipment Identity (IMEI: - used for identification on Global system for mobile communication).
